## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-20, drawn to thickness measurement directing and receiving light substantially perpendicular to substrate, classified in class 356, subclass 630.
  - II. Claims 21-46, drawn to thickness measurement apparatus using 220nm to 850nm light, classified in class 356, subclass 504.
  - III. Claims 47-59, drawn to electronic fabrication with separately-recited light projecting and receiving units, classified in class 438, subclasses 16, 7.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, either invention has separate utility such as either for measurement in a laboratory, or in-line during manufacturing. See MPEP § 806.05(d).
3. Inventions III and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention I recites a single unit for both directing and receiving light. The subcombination has separate utility such as for measurement in a laboratory.
4. Inventions III and II are related as combination and subcombination. Inventions in this

Art Unit: 2877

relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention III does not recite 220nm to 850nm. The subcombination has separate utility such as in a laboratory setting, rather than production-line manufacturing.

5. Because these inventions are distinct for the reasons given above and the search required for each Group is not required for other Groups, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
